

Climate is Changing

Weather is rain, sun, snow, etc.  
in a week or month.

Climate is rain, snow, etc.  
for a year or more.

# Tornadoes

1995 - 2007

[www.aos.wisc.edu](http://www.aos.wisc.edu)

How do Tornadoes affect?

Tornadoes affect climate, people, animals, crops and the environment. By destroying buildings and trees. Tornadoes also kill animals and crops.

What can we do to help?

Build better shelters for humans and animals. For people's houses that get destroyed in a tornado, have them shaken and help out.

## Weather

Weather is short term. A month or less.

## How Temperature Affects U.S.

It affects us by it being too hot. If it is too hot people can die. If people are already sick they could get worse.

## Climate

Climate is long term. It is a year or more.

## What can we do to help.

- Set up warning systems to alert people about heat emergencies.
- Set up emergency cooling centers for people without air conditioning.
- Make cities "cooler" by planting more trees and creating more parks.

# CLIMATE IS CHANGING

By: Isaac Hill & Colin Merwin

## Weather:

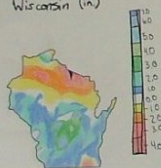

the daily or weekly temperature and conditions for a specific area

## Climate:

The average yearly conditions in a specific place.

## SUMMER DROUGHTS

Summer Precipitation in Wisconsin (in)

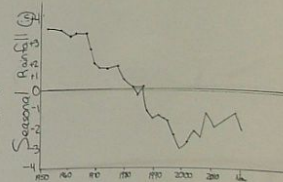

### How Droughts Affect People

- We have less water and we ~~need~~ water to live.
- We also rely on water to make electricity.
- Farmers crops will die without water.
- The farmers would not have enough money to run their farm.

### What Can We Do To Stop It?

- Not waste the water that we have.
- Water we waste is blood we lose.
- Collect rain water.
- Turn off your water tap for things you don't need it for.

# Climate is Changing.

Weather is  
Short-term temperature

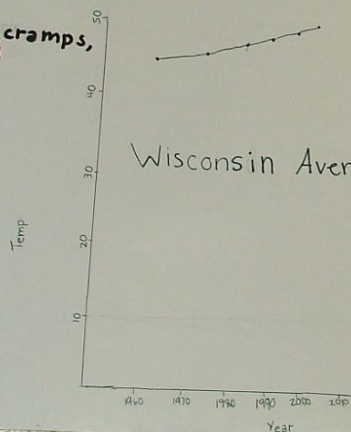

Climate is  
Long-term weather  
over years.

Hot temperatures cause heat stroke, cramps,  
and even death. It can spread  
infectious diseases from insects.

To prevent diseases spreading we can wear  
long sleeves, use insect repellent. To stay healthy  
check the forecast on tv or in the newspaper.

Wisconsin Average temps

# Climate is Changing

## Tornadoes

1. Weather is ...  
over a short period  
of time.

2. Climate is ...  
over a long  
period of time.  
A year or more.

A lot of tornadoes  
have occurred

3. Tornadoes can effect people  
because they can damage shelter,  
crop, and thing that we need to  
live.

4. What can we do?

- We can build stronger shelters.
- Don't build in areas arounds  
tornado sights
- Set up reinforced shelters for  
people who cannot evacuate.

Lets be real  
Kids, it's happening  
Climate change  
is real, and it's

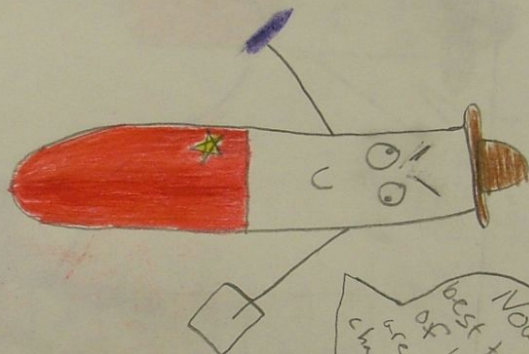

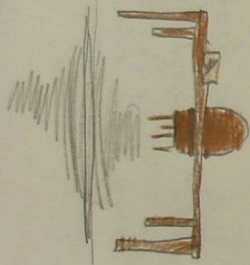

BA  
Climate and Biodiversity

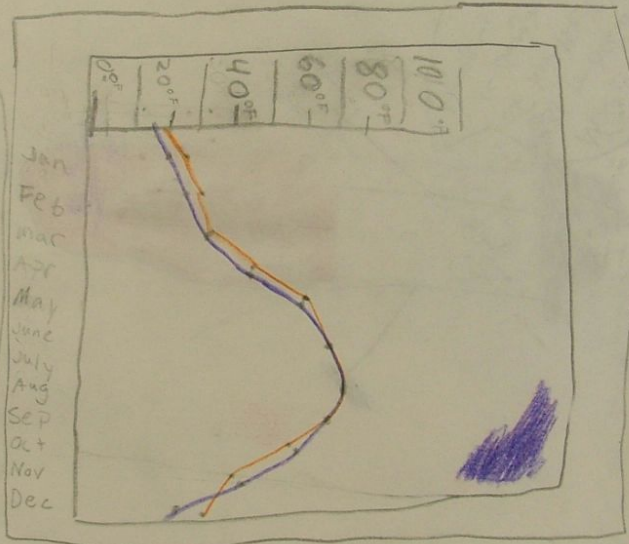

Well butter my buns and  
call me a biscuit,  
I think it's time to  
prove to you that climate  
change is for real.

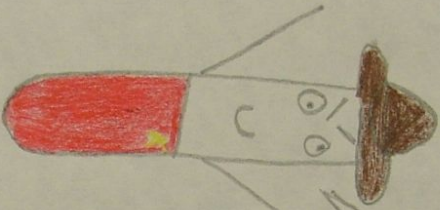

Now I'm gonna try my  
best to draw YOU a chart  
of how the air temperatures  
are changing due to climate  
change.

This is a graph of Madison Wisconsin's temperature change from 1950 to 2006. The purple is 1950 and the orange is 2006. The change may seem small, but it is, but it may get worse...

If we keep letting climate change, then we will experience longer droughts, stronger storms and colder winters and hotter summers.

So every-  
body...  
RECYCLE!

Andrew Winters/6-2  
Iowa-Grant

Weather is the daily precipitation, temperature, and humidity.

How it effects people

- Some of the effects from temperature could be bigger and life threatening hurricanes. Also there will be more air pollution. People with Asthma will have trouble breathing.

Platteville Wisconsin, Yearly Temperatures

Climate is the yearly weather or data recorded of the temperatures, or the rain or snow.

What can we do?

- We can walk more, and drive less. We can also not use as much electricity. We can use less water, and recycling.

## Weather:

Weather is the temperature within a day or week.

How Is climate change affecting us?

Weather and climate play a significant role in people's health. Changes in climate affect the average weather conditions that we are accustomed to. Warmer average temperatures will likely lead to hotter days and more frequent and intense heat waves etc.

## Climate:

Climate is the temperature over a long period of time.
